Model

No. **NY10 AJ**

Blade shape

**AJ** : Straight blades for plastic ————— **RAJ** : Straight blades for plastic reverse bevel

**AJL** : Straight long blades for plastic

**AJT** : Thin, straight blades for plastic

**AE** : Nipping blades for plastic

**AJY** : Thin, straight blades for plastic

**AD** : Lift blades for plastic

**AH** : Crank blades for plastic ————— **RAH** : Crank blades for plastic reverse bevel

**AJB** : Straight blades for plastic, a brazed carbide tip

**AV** : V shaped straight blades for plastic

**AJH** : Straight blades for plastic, a brazed high-speed steel tip

**BJ** : Straight thin blades for metal ————— **RB** : Straight thin blades for metal reverse bevel

For more precise gate-cutting:

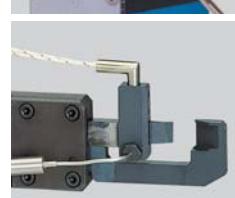

## Heat air nippers

These nippers perform cutting by applying heat to the blade edges.

They are good for cutting acrylic lens.

194P

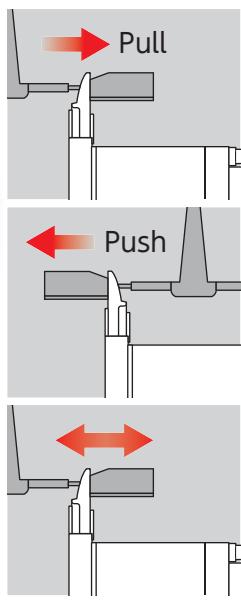

193P

## Heat air nippers Thrust-cut type

Cutting by the application of heat; thrust-cutting type ensuring a clean, unblemished cut surface constantly.

## Slide-off air nippers

The main unit of the nipper slides and the blade comes into intimate contact with a gate, enabling to cut it without resin residue.

### Pull/Push

A wide selection of models can support various applications. Possible to fix the highly precise positioning against the gate as there is less rattling or deflection.

185P

### Double action type

Slide mechanism not using a spring ensures smooth action. It is free from concerns about spring wear or metal fatigue, resulting in high durability.

186P

### Square type

Provided with threaded holes on the 5 faces of the main unit. Suitable for incorporating into a machine or equipment.

197P

### Round type

Possible to adjust freely the mounting angle by a stand (option). Suitable for installation on a robotic arm or chuck plate.

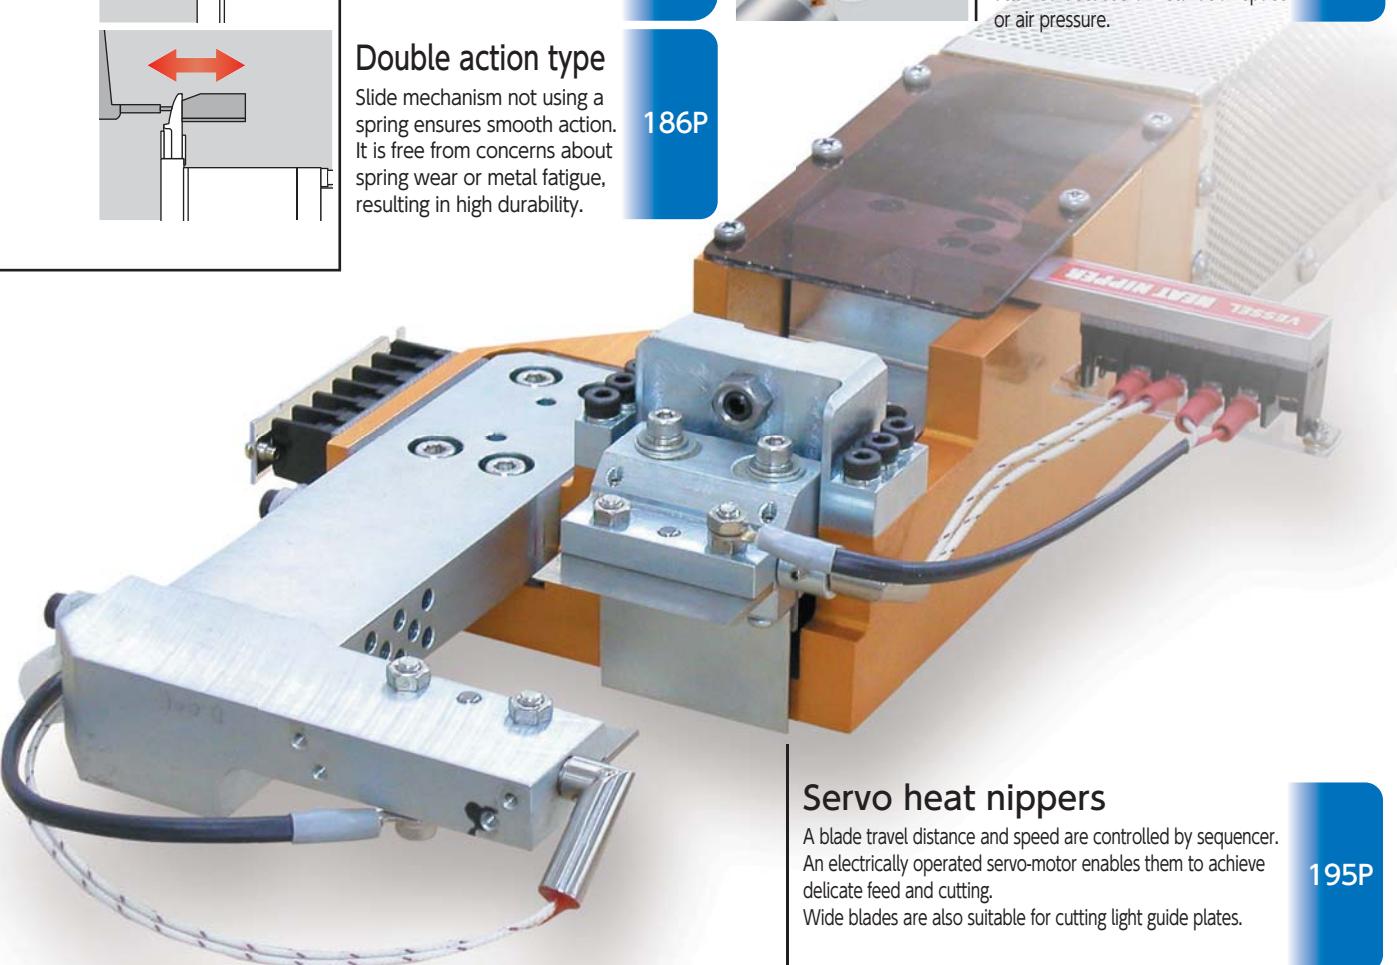

198P

### Extra Pressure Booster

Installing this unit on either square or round air nipper enables a pressure to be boosted. Ideal for applications where the radical pressure cannot be attained because of installation space or air pressure.

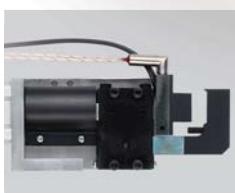

198P

## Servo heat nippers

A blade travel distance and speed are controlled by sequencer. An electrically operated servo-motor enables them to achieve delicate feed and cutting. Wide blades are also suitable for cutting light guide plates.

195P

## Differences in the cut surfaces when using heat nippers

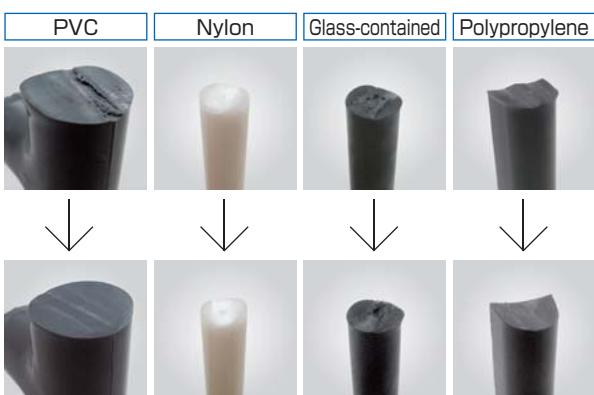

### Air-hydro nippers Thrust-cut type

An air-hydro cylinder of air + oil provides low speeds and high power. These nippers are suitable for precision cutting in which gate projecting allowance is strict.

Heat Nippers

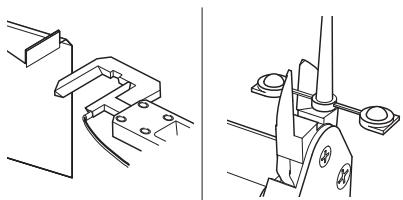

# Applications

## Cutting direct gate molded components

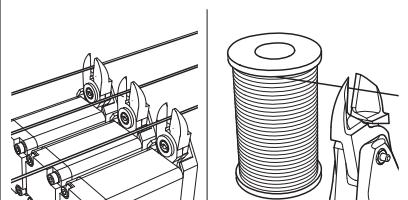

Cuts large diameter sprues such as garment cases, helmets, pipe joint parts, trash cans, planters. Superb durability in long term use.

## Gate cutting for lenses, LGP, and transparent products

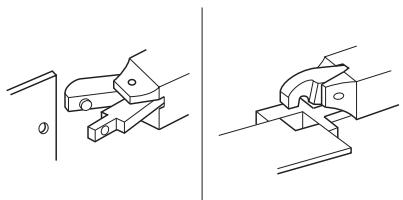

Various heated nippers prevent cracks and whitening, the decisive factor is the heating temperature of the blades and cutting speed. Supports demands for improved flexibility and high precision cutting.

## Wire cutting with coil winding machine

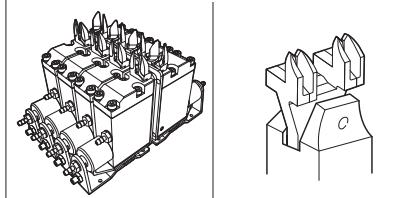

Attach to the nipper unit of automatic coil winding machine for power transformers, fan motors and ignition. Cutting thick diameter wires that cannot be torn off.

## Die cutter for aluminum products and plastic components

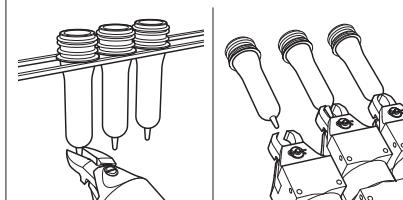

By support for separate blades, allows punching and form cutting of aluminum sash and thin plates.

## Gate cut for multiple impression molded components

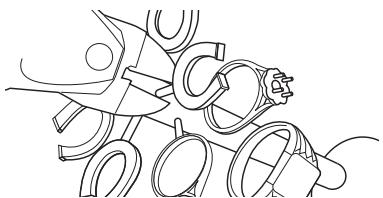

Compact, lightweight body and with a large selection of blade items, easy mounting on chuck board and standby jig. Achieves efficient cuts matching cycle time.

## Pre-form cutting for food and drug cases

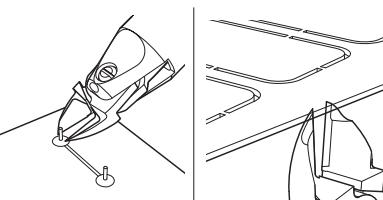

Improved efficiency in pre-forming, nippers attached to flat finish pre-form molding machine. Cut precision is linked to product quality.

## Taking products from a jewelry tree

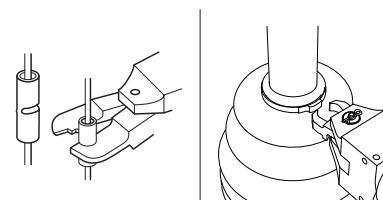

Cutting of precious metals for rings, necklaces etc. Superb durability and increased efficiency with powerful nipper blades.

## Cutting electronic components and around boards

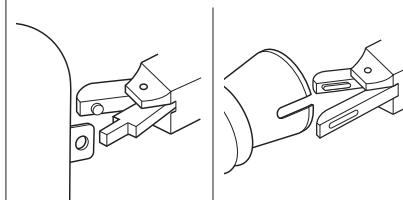

Optimal handy nippers for cutting lead lines after soldering to significantly reduce wrist strain. Substrate is attached to the desktop robot….

## Crimping task for solderless terminals

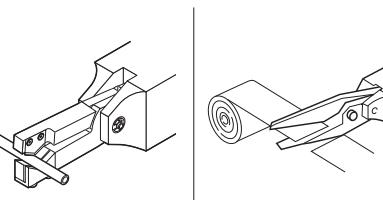

For crimping terminals with various wiring harnesses such as for switchboards, electrical products and lighting equipment. Less strain on fingers and wrists. Increased work efficiency for stop rings for auto parts.

## Punching of blow molded products, punching slotted holes

Punching blow molded products, punching slotted holes, for containers that cannot be punched and automobile ducts, etc.

## Other applications

Micro-edge air scissors that can cut various hard-to-cut fibers, carbon, aramid fibers, and soft plastic sheets.

Nippers for cutting belt loops of jeans, peeling recycled golf balls, cutting edges with textile machinery, etc.

# Selection method for air nipper

## Check materials

### What is the "cutting target (workpiece)"?

- Metal wire
  - Steel wire
  - Copper wire
  - Piano wire (not heat processed/HV320 or below), precious metals etc.
- Molded plastic
  - Soft plastic (polyvinyl chloride, polyethylene)
  - Hard plastic (acrylic, polycarbonate, ABS, etc.)
- Other applications
  - Check materials, applications and work.  
(Bending, caulking, punching, robotic hand, and scissors.)

## Check dimensions

### How big is the "size of the cut portion"?

- Metal
  - Angle (mm×mm) [select model by cross-section area]
  - Round (Φ mm)
- Plastic
  - Angle (mm×mm) [select model by cross-section area]
- Other applications
  - Check materials, applications and work.

## Usage

### What is the "state/environment of the work"?

- Used mounted on automated machinery and robots.
- Used for manual work.
- Used mounted on a jig. And so forth

## Select model

### Choose a model suitable for the purpose.

Choose based on "usage and cut dimensions" for the main unit, and "material and dimensions/shape" for the blades.

Refer to "product specifications" for the main unit/blade characteristics/usage, respectively. Also when selecting the machine, refer to "capability selection chart".

The shape/material of the workpiece may not be compatible with standard products.

## Guidance for capability selection

Note: Reference value when a standard blade is mounted.  
Values vary depending on the blade shapes and types of cut objects.

### Sliding Air Nippers Horizontal-Type

The horizontal slide enables space to be utilized effectively.

The low profile of the npper body allows objects to be removed from the machine without obstructing the operations of the chuck plate.

**No. GT-NT03/05/10/20 Sliding Air Nippers Vertical-type**

- Blade opening is adjustable, and fine adjustments are easy to make after mounting the nippers, ensuring clean, unblemished cut surfaces.

- Blade can be installed either with the cutting edge outside or inside.

## Servo Heat Nippers

These air nippers are connected to a heater to suppress cracks and whitening of clear materials such as acrylic.

The gate is slowly melted as it's cut, resulting in a clean, unblemished cut surface.

No. NKHD45R-50

### Servo Heat Nippers (With Motor Cylinder)

The blade is fed to the gate position speedily and is controlled to cut very slowly, making the cut surface clean and unblemished.

## Air Nipper Round-Type without Lever

A tough body for hard jobs. The parts machined at high precision enable smooth cutting jobs to be accomplished.  
With convenient scales facilitating the installation position adjustment.

No. GT-NS3/5/7/10L/20/30 Square Air Nippers

●VESSEL provides a generous selection of blades for gate-cutting of resin molded products and various wire cutting in a welding automatic machine and wire winding machine.

- The position of air intake port is 180-degree rotatable.
- Two air intake ports are provided, so they can be switched depending on the mounting place.

※The capacity in the above table is given for reference, when mounting a standard type of blade.

The capacity depends on the blade shape and the material of the object to cut.

• Air hose inner dia: 5mm • Overall length and Weight: Accessories not included.

※Before mounting on dedicated/automatic machines, check the following product dimensions.  
(Flame O.D., screw dia. (screw to screw) dimensions, etc.)

※Capacity ( $\phi$ ) is for reference purpose only. It varies depending on products.
